BIOL. 11:473-481(1988).
-!- FUNCTION: IN THE PRESENCE OF OTHER NECESSARY COLOR FACTORS, GLYCOSYLATION REACTION ALLOWS THE ACCUMULATION OF ANTHOCYANI PIGMENTS.
-!- CATALYTIC ACTIVITY: UDP-GLUCOSE + A FLAVONOL = UDP + FLAVONOL - UDP-GLUCOSIDE.
-!- PATHWAY: ONE OF THE ESSENTIAL AND TERMINAL STEPS IN THE ANTHOCYANIN BIOSYNTHETIC PATHWAY.
-!- SIMILARITY: BELONGS TO THE UDP-GLYCOSYLTRANSFERASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SEQUENCE FROM N.A.

MPsrch\_pp protein - protein database search, using Smith-Waterman algorithm on:

Thu Sep 2 12:47:30 1999; MasPar time 2.21 Seconds 153.600 Million cell updates/sec

Title: >US-08-599-226-33 Description: (1-12) from US08599226.pep Perfect Score: 74

ular output not generated.

Sequence: 74
Sequence: 1 ASFLSTSSSLEY 12

Scoring table: PAM 150 Gap 15

Searched: 77977 seqs, 28268293 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: swiss-prot37

Statistics: Mean 25.085; Variance 27.334; scale 0.918

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Statistics: Mean 24.013; Variance 31.833; scale 0.754

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

MPsrch\_pp protein - protein database search, using Smith-Waterman algorithm

abular output not generated. n on: Thu Sep 2 12:51:12 1999; MasPar time 2.19 Seconds 155.131 Million cell updates/sec

Description: Perfect Score: Title: >US-08-599-226-34 (1-12) from US08599226.pep 75

Scoring table: PAM 150 Gap 15 Sequence:

1 ASYLSTASSLEY 12

77977 seqs, 28268293 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: swiss-prot37 1:swissprot

Statistics: Mean 25.133; Variance 27.887; scale 0.901

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

og. 2. ENTAL PROTEIN; REPEAT; GROWTH FACTOR; AL-ANCHOR. CYTOPLASMIC (POTENTIAL).	This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation the European Bioinformatics Institute. There are no restrictions on its use by non-profit institutions as long as its content is in no way modified and this statement is not removed. Usage by and for commercial entities requires a license agreement (See http://www.isb-sib.ch/announce/or send an email to license@isb-sib.ch).	-!- FUNCTION: PUTATIVE NEGATIVE GROWTH FACTOR; ANTAGONIST OF DPP, A PROTEIN INVOLVED IN PATTERNING THE DORSAL REGION AND IN THE DEVELOPMENT OF THE NEUROECTODERM!- SUBCELLULAR LOCATION: TYPE II MEMBRANE PROTEIN (POTENTIAL)!- TISSUE SPECIFICITY: ABUTS THE DORSAL DPP-EXPRESSING CELLS IN A LATERAL STRIPE 14-16 CELLS WIDE. LATER IN EMBRYOGENESIS IT IS EXPRESSED IN NEUROECTODERM AND IN THE ENDODERM SPACED ALONG THE ANTERIOR-POSTERIOR AXIS OF THE DEVELOPING GUT!- DEVELOPMENTAL STAGE: EMBRYOGENESIS!- SIMILARITY: CONTAINS 4 VWFC DOMAINS.	DIFTERA: BRACHYCERA; MUSCOMORPHA; EPHYDRO DAE; DROSOPHILA.  ROM N.A. 5047398. 7., SOLLOWAY M., O'NEILL J.W., EMERY J., BI intral patterning of the Drosophila embryo egative growth factor encoded by the short 8:2602-2616(1994). MPsrch\_pp protein - protein database search, using Smith-Waterman algorithm

bular output not generated. Thu Sep 2 12:50:40 1999; MasPar time 3.12 Seconds 154:181 Million cell updates/sec

Title: >US-08-599-226-34 (1-12) from US08599226.pep 75

Description:
Perfect Score:
Sequence: 1 ASYLSTASSLEY 12

Scoring table: PAM 150 Gap 15

Searched: 122810 seqs, 40068593 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: pir60 1:pir1 2:pir2 3:pir3 4:pir4

Statistics: Mean 24.614; Variance 30.527; scale 0.806

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

MPsrch\_pp protein - protein database search, using Smith-Waterman algorithm

ın on: Thu Sep 2 12:52:29 1999; MasPar time 1.40 Seconds 86.863 Million cell updates/sec

abular output not generated.

Description: Perfect Score: Title: >US-08-599-226-54 (1-12) from US08599226.pep 75 1 ASYLSTASSLEY 12

Scoring table: PAM 150 Gap 15 Sequence:

106580 seqs, 10152877 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: 

Statistics: Mean 16.154; Variance 53.667; scale 0.301

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CT The present sequence is a novel anti-human tumour necrosis factor-alpha (TNF-alpha) antibody (Ab) heavy chain complementarity Cd determining region 3 (CDR3).

CC The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or Cless and has a Koff rate constant of 1x10 power -3 s power -1 or Cless and has a Koff rate constant of 1x10 power -3 s power -1 or CC less (both determined by surface plasmon resonance), and CC 1299 assay with an IC50 of 1x10 power -7 M or less. The Ab, which CC inhibits TNF-alpha activity, can be used to treat sepsis, CC autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis, rheumatoid constitution, infectious diseases, malignancy, pulmonary, intestinal, CC sclerosis, autoimmune disbetes, autoimmune uveitis or nephrotic CC syndrome, infectious diseases, malignancy, pulmonary, intestinal, CC alcoholic, viral or fulminant hepatitis, coagulation disturbances, CC alcoholic, viral or fulminant hepatitis, coagulation toxicity. The Ab also inhibits INF-alpha induced expression of endothelial cell call exhocyte adhesion molecule-1 (FIAM-1) on human umbilical vein

The present sequence is a novel anti-human tumour necrosis factor-alpha (TNF-alpha) antibody (Ab) heavy chain variable region. The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or less and has a Koff rate constant of 1x10 power -3 s power -1 or less (both determined by surface plasmon resonance), and neutralises human TNF-alpha cytotoxicity in a standard in vitro neutralises human TNF-alpha cytotoxicity in a standard in vitro 1p29 assay with an IC50 of 1x10 power -7 M or less. The Ab, which inhibits TNF-alpha activity, can be used to treat sepsis, autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis, ratery multiple sclerosis, autoimmune diseases, autoimmune uveltis or nephrotic syndrome, infectious diseases, malignancy, pulmonary, intestinal, cardiac or inflammatory bone disorders, bone resorption disease, alcoholic, viral or fulminant hepatitis, coagulation disease, burns, reperfusion injury, keloid formation, scar tissue formation, pyrexia, periodontal disease, obesity and radiation toxicity. RESULT IN A CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL OF THE CONTROL O
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   I Mankovich JA, McGuiness BT, Roberts AJ, Sakorafas P, I Salfeld JG, Schoenhaut D, Vaughan TJ, White M, Wilton AJ; WPI; 97-415302/38.

High affinity antibodies against human TNF alpha - useful to inhibit TNF alpha activity, e.g. to treat autoimmune diseases and cancer PS Claim 20; Page 74; 102pp; English.

THF alpha activity, e.g. to treat autoimmune diseases and cancer PS Claim 20; Page 74; 102pp; English.

CC The present sequence is a novel anti-human tumour necrosis factor-alpha (TNF-alpha) antibody (Ab) heavy chain complementarity CC determining region 3 (CDR3).

CC The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or CC less and has a Koff rate constant of 1x10 power -3 s power -1 or CC less (both determined by surface plasmon resonance), and concurrentises human TNF-alpha cytotoxicity in a standard in vitro CC less (both determined by surface plasmon resonance), and continuous diseases, e.g. rheumatoicity in a standard in vitro CC inhibits TNF-alpha activity, can be used to treat sepsis, CC autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis, allergy mulltiple CC syndrome, infectious diseases, malignancy, pulmonary, intestinal, CC cardiac or inflammatory bone disorders, bone resorption disease, CC burns, reperfusion injury, keloid formation, scar tissue formation, CC burns, reperfusion injury, keloid formation, scar tissue formation, CC burns, reperfusion molecule-1 (ELAM-1) on human umbilical vein CC endothelial cells (MUMPE)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                  Anti-TNF-alpha antibody heavy chain CDR3.

High affinity antibodies against human TNF alpha - useful to inhibit
TNF alpha activity, e.g. to treat autoimmune diseases and cancer
Sclaim 20; Page 74; 102pp; English.

The present sequence is a novel anti-human tumour necrosis
factor-alpha (TNF-alpha) antibody (Ab) heavy chain complementarity
C determining region 3 (CDR3).

The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or
cless and has a Koff rate constant of 1x10 power -3 s power -1 or
cless and has a Koff rate constant of 1x10 power -7 M or
cless tooth determined by surface plasmon resonance), and
neutralises human TNF-alpha cytotoxicity in a standard in vitro
cless (both determined by surface plasmon resonance), and
neutralises human TNF-alpha cytotoxicity in a standard in vitro
cless (both determined by surface plasmon resonance), and
neutralises numan TNF-alpha cytotoxicity in a standard in vitro
cless gondylitis, osteoarthritis, can be used to treat sepsis,
autoimmune diseases, e.g. Theumatoid arthritis, rheumatoid
spondylitis, osteoarthritis, gouty arthritis, allergy, multiple
sclerosis, autoimmune diseases, malignancy, pulmonary, intestinal,
cardiac or inflammatory bone disorders, bone resorption disease,
cardiac or inflammatory bone disorders, bone resorption disease,
clarkovite adhesion molycry, keloid formation, scar tissue formation,
pyrexia, periodontal disease, obesity and radiation toxicity. The
Ab also inhibits TNF-alpha induced expression of endothelial cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or class and has a Koff rate constant of 1x10 power -3 s power -1 or less (both determined by surface plasmon resonance), and neutralises human TNF-alpha cytotoxicity in a standard in vitro 1y29 assay with an IC50 of 1x10 power -7 M or less. The Ab, which inhibits TNF-alpha activity, can be used to treat sepsis, autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis, allergy, multiple sclerosis, autoimmune diseases, autoimmune uveifis or nephrotic syndrome, infectious diseases, multipnancy, pulmonary, intestinal, cardiac or inflammatory bone disorders, bone resorption disease, alicoholic, viral or fulminant hepatitis, coaquiation disturbances, burns, reperfusion injury, keloid formation, scar tissue formation, pyrexia, periodontal disease, obesity and radiation toxicity. The hab also inhibits TNF-alpha induced expression endothelial cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Best Loc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ន្តន្តន្តន្ត
                                                                                                             determining region 3 (CDR3).

C determining region 3 (CDR3).

C The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or less and has a Koff rate constant of 1x10 power -3 s power -1 or less (both determined by surface plasmo resonance), and neutralises human TNF-alpha cytotoxicity in a standard in vitro cryotoxicity in a standard in vitro 1x92 assay with an ICS0 of 1x10 power -7 M or less. The Ab, which inhibits TNF-alpha activity, can be used to treat sepsis, autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis, allergy, multiple cardiac or inflammatory bone disorders, bone resorption disease, calcoholic, viral or fulminant hepatitis, coagulation disturbances, burns, reperfusion injury, keloid formation, scar tissue formation, pyrexia, periodontal disease, obesity and radiation toxicity. The leukocyte adhesion molecule-1 (ELAM-1) on human umbilical vein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              factor-alpha (TNF-alpha) antibody (Ab) heavy chain complementarity determining region 3 (CDR3).

The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or less and has a Koff rate constant of 1x10 power -3 s power -1 or less (both determined by surface plasmon resonance), and neutralises human TNF-alpha cytotoxicity in a standard in vitro constant of 1x10 power -7 M or less. The Ab, which is sassy with an IC50 of 1x10 power -7 M or less. The Ab, which is inhibits TNF-alpha activity, can be used to tract sepsis, autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid spondylitis, osteoarthritis, youty arthritis, allergy multiple syndrome, infectious diseases, autoimmune uveitis or nephrotic syndrome, infectious diseases, malignancy, pulmonary, intestinal, cardiac or inflammatory bone disorders, bone resorption disease, alcoholic, viral or fulminant hepatitis, coagulation disturbances, burns, reperfusion injury, keloid formation, scar tissue formation, pyrexia, periodontal disease, obesity and radiation toxicity. The hab also inhibits TNF-alpha induced expression of endothelial cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

PI High affinity antibodies against human TNF alpha - useful to inhibit
PT TNF alpha activity, e.g. to treat autoimmune diseases and cancer
PT slisclosure; Page 75; 102pp; English.

CC The present sequence is a novel anti-human tumour necrosis
factor-alpha (TNF-alpha) antibody (Ab) heavy chain complementarity
CC determining region 3 (CDR3).

CC The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or
CC less and has a Koff rate constant of 1x10 power -3 s power -1 or
CC less (both determined by surface plasmon resonance), and
CC neutralises human TNF-alpha cytotoxicity in a standard in vitro
CC 1299 assay with an IC50 of 1x10 power -7 M or less. The Ab, which
CC autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid
CC spondylitis, ostcoarthritis, gouty arthritis, allergy, multiple
CC sclerosis, autoimmune diabetes, autoimmune uveitis or nephrotic
CS syndrome, infectious diseases, malignancy, pulmonary, intestinal,
cardiac or inflammatory bone disorders, bone resorption disease,
CC burns, reperfusion injury, kelold formation, scar tissue formation,
CC burns, reperfusion molecule-1 (ELAM-1) on human umbilical vein
CC leukocyte adhesion molecule-1 (ELAM-1) on human umbilical vein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

Helicobacter pylori nucleic acid sequences and encoded polypeptide(s) - useful in vaccines to treat or prevent H. pylori infection and for diagnosis of H. pylori infection Claim 14; Page 502; 1145pp; English.

This sequence is a H. pylori protein of unspecified function. The protein may be used in a vaccine to prevent or treat H. pylori infection or to identify H. pylori polypeptide binding compounds, useful as potential H. pylori life cycle activators or inhibitors. The DNA and probes derived from it may be used for the identification of H. pylori in a sample and the diagnosis of H. pylori infection. Nucleic acid sequences complementary to the DNA act as antisense sequences and can be used to prevent the translation of H. pylori mRNA. Antibodies against the protein can be used in immunoassays to evaluate the abundance
                                                                                                                                                                                                                                                                                                                        02-APR-1996;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 岛
                                                                                                                                                                                                                        The protein may be used in a vaccine to prevent or treat H. pylori CC infection or to identify H. pylori polypeptide binding compounds, useful as potential H. pylori life cycle activators or inhibitors. The CC useful as potential H. pylori life cycle activators or inhibitors. The CC UnNand probes derived from it may be used for the identification of CC H. pylori in a sample and the diagnosis of H. pylori infection. Nucleic acid sequences complementary to the DNA act as antisense sequences and CC can be used to prevent the translation of H. pylori mRNA. Antibodies capainst the protein can be used in immunoassays to evaluate the abundance and distribution of H. pylori-specific antigens. The genomic sequence of H. pylori (ATCC 55679) was determined from overlapping contigs generated by mechanically shearing the bacterial DNA. The sequences were analysed for ORF of at least 180 nucleotides, and the predicted coding regions cefined by computer evaluation. To identify likely H. pylori antigens for vaccine development, the amino acid sequences predicted from various ORF membrane proteins. Having identified and determined the sequences of interest, particular regions can be isolated from H. pylori by PCR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Best Loc

The genomic sequence of H. pylori (ATCC 55679) was determined from overlapping contigs generated by mechanically shearing the bacterial DNA. The sequences were analysed for ORF of at least 180 nucleotides, and the predicted coding regions defined by computer evaluation. To identify likely H. pylori antigens for vaccine development, the amino acid sequences predicted from various ORF were analysed for significant homology to other known or exported membrane proteins. Having identified and determined the sequences of interest, particular regions can be isolated from H. pylori by PCR amplification for recombinant polypeptide production, e.g. in E. coli
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Helicobacter pylori nucleic acid sequences and encoded polypeptide(s) - useful in vaccines to treat or prevent H. infection and for diagnosis of H. pylori infection Claims 14,80; Page 679; 1145pp; English. This sequence is a H. pylori cell envelope inner membrane pinvolved in cofactor metabolism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    W09737044-A1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            H. pylori ORF 06cp30603_22452_c3_80 inner membrane protein.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC involved in cofactor metabolism.

CT The protein may be used in a vaccine to prevent or treat H. pylori confection or to identify H. pylori polypeptide binding compounds, consequence of the protein as potential H. pylori life cycle activators or inhibitors. The CC useful as potential H. pylori life cycle activators or inhibitors. The CC useful as potential H. pylori life cycle activators or inhibitors. The CC acid sequences complementary to the DNA act as antisense sequences and cc can be used to prevent the translation of H. pylori mRNA. Antibodies can be used to prevent the translation of H. pylori mRNA. Antibodies can distribution of H. pylori-specific antigens. The genomic sequence of the pylori (ATCC 55679) was determined from overlapping contigs generated by mechanically shearing the bacterial DNA. The sequences were analysed for ORF of at least 180 nucleotides, and the predicted coding regions coding development, the amino acid sequences predicted from various ORF were analysed for significant homology to other known or exported membrane proteins. Having identified and determined the sequences of interest, particular regions can be isolated from H. pylori by PCR amplification for recombinant polypeptide production, e.g. in E. coli
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         멼

                                      밁
                                                                                                                                                  Endoglucanase(s), preferably form archael bacterium, AEPII la-
y useful to degrade carboxymethylcellulose and hydrolyse of
peta-1,4-glycosidic bonds in cellulose
S Claim 1; Fig IC; 164pp; English.

This protein comprises an endoglucanase of Bankia gouldi mix (clone
37GP2) that is capable of degrading carboxymethylcellulose and of
hydrolyging the beta-1,4-glycosidic bonds in cellulose. It has
homology to an endoglucanase of archaebacterium AEPIIIa (see
W34985). It can be produced from native cells or from recombinant
host cells, especially prokaryotic host cells transformed with a
plasmid or virus-derived vector including the endoglucanase DNA
(see T94195). 24 Endoglucanases (see W34986-W35008) are claimed.
They can be used to degrade cellulose for the conversion of plant
biomass into fuels and chemicals, for use in detergents, textiles,
animal feed, waste treatment, and in the fruit juice and brewing
clindustries for the clarification and extraction of juices.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     88888888888
                                                                                                                     determining region 3 (CDR3).

C determining region 3 (CDR3).

C determining region 3 (CDR3).

C The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or less and has a Koff rate constant of 1x10 power -3 s power -1 or less (both determined by surface plasmo resonance), and neutralises human TNF-alpha cytotoxicity in a standard in vitro L929 assay with an IC50 of 1x10 power -7 M or less. The Ab, which is inhibits TNF-alpha activity, can be used to treat sepsis, autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis, allergy, multiple sclerosis, autoimmune diabetes, autoimmune uveitis or nephrotic syndrome, infectious diseases, malignancy, pulmonary, intestinal, cardiac or inflammatory bone disorders, bone resorption disease, alcoholic, viral or fulminant hepatitis, coagulation disturbances, burns, reperfusion injury, keloid formation, scar tissue formation, pyrexia, periodontal disease, obesity and radiation toxicity. The Ab also inhibits TNF-alpha induced expression of endothelial celling the procession of and the point of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition

The present sequence is a novel anti-human tumour necrosis factor-alpha (TNF-alpha) antibody (Ab) heavy chain complementarity determining region 3 (CDR3).

The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or less and has a Koff rate constant of 1x10 power -3 s power -1 or less (both determined by surface plasmon resonance), and neutralises human TNF-alpha cytotoxicity in a standard in vitro less (both determined by surface plasmon resonance), and neutralises human TNF-alpha cytotoxicity in a standard in vitro 1292 assay with an IC50 of 1x10 power -7 M or less. The Ab, which inhibits TNF-alpha activity, can be used to treat sepsis.

Cautoinmune diseases, e.g. rheumatoid arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis, allergy, multiple syndrome, infectious diseases, malignancy, pulmonary, intestinal, cardiac or inflammatory bone disorders, bone resorption disease, burns, reperfusion injury, keloid formation, scar tissue formation, pyrexia, periodontal disease, obesity and radiation toxicity. The ab also inhibits TNF-alpha induced expression of endothelial cell eleukoryte adhesion molecule-1 (FIAM-1) on human umbilical cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Anti-TNF-alpha antibody heavy chain CDR3. factor-alpha (TNF-alpha) antibody (Ab) heavy chain complementarity
determining region 3 (CDR3).
The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or
less and has a Koff rate constant of 1x10 power -3 s power -1 or
less (both determined by surface plasmon resonance), and
neutralises human TNF-alpha cytotoxicity in a standard in vitro
cupic assay with an IC50 of 1x10 power -7 M or less. The Ab, which
inhibits TNF-alpha activity, can be used to treat sepsis,
autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid
spondylitis, osteoarthritis, gouty arthritis, allergy, multiple
sclerosis, autoimmune diabetes, autoimmune uveitis or nephrotic
scribac or inflammatory bone disorders, bone resorption disease,
alcoholic, viral or fulminant hepatitis, coagulation disturbances,
burns, reperfusion injury, keloid formation, soar tissue formation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (BADI) BASF AG.

The Ab, which inhibits TNR-alpha activity, can be used to treat sepsis, autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or class and has a Koff rate constant of 1x10 power -3 s power -1 or less (both determined by surface plasmon resonance), and neutralises human TNF-alpha cytotoxicity in a standard in vitro 1299 assay with an IC50 of 1x10 power -7 M or less. The Ab, which cinhibits TNF-alpha activity, can be used to treat sepsis, autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis, allergy, multiple consoling, intetious diseases, autoimmune uveitis or nephrotic syndrome, infectious diseases, malignancy, pulmonary, intestinal, cardiac or inflammatory bone disorders, bone resorption disease, cardiac or inflammatory bone disorders, bone resorption disease, calcoholic, viral or fulminant hepatitis, coagulation disturbances, pyrexia, periodontal disease, obesity and radiation toxicity. The ab also inhibits TNF-alpha induced expression of endothelial cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches

                                                                                                                                                                                                        The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or less and has a Koff rate constant of 1x10 power -3 s power -1 or less both determined by surface plasmon resonance), and neutralises human TNF-alpha cytotoxicity in a standard in vitro L929 assay with an IC50 of 1x10 power -7 M or less. The Ab, which inhibits TNF-alpha activity, can be used to treat sepsis, autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid sepsis, autoimmune diseases, e.g. rheumatoid arthritis, allergy, multiple sclerosis, autoimmune diabetes, autoimmune weitis or nephrotic syndrome, infectious diseases, malignancy, pulmonary, intestinal, cardiac or inflammatory bone disorders, bone resorption disease, alcoholic, viral or fulminant hepatitis, coagulation disturbances, burns, reperfusion injury, keloid formation, scar tissue formation, pyrexia, periodontal disease, obesity and radiation toxicity. The burns inhibits TNF-alpha induced expression of endothelial cell
                                                                  Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

High affinity antibodies against human TNF alpha - TNF alpha activity, e.g. to treat autoimmune disea Claim 20; Page 73; 102pp; English.

The present sequence is a novel anti-human tumour factor-alpha (TNF-alpha) antibody (Ab) heavy chain determining region 3 (CDR3).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             W27589 standard; peptide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (BADI ) BASF AG.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is a novel anti-human tumour necrosis
factor alpha (TNF alpha) antibody (Ab) heavy chain complementarity
determining region 3 (CD3).

The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or
less and has a Koff rate constant of 1x10 power -3 s power -1 or
less (both determined by surface plasmon resonance), and
neutralises human TNF-alpha cytotoxicity in a standard in vitro
neutralises human TNF-alpha cytotoxicity in a standard in vitro
L929 assay with an IC50 of 1x10 power -7 M or less. The Ab, which
inhibits TNF-alpha activity, can be used to treat sepsis,
autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid
spondylitis, osteoarthritis, gouty arthritis, allergy, multiple
sclerosis, autoimmune diabetes, autoimmune uveitis or nephrotic
syndrome, infectious diseases, malignancy, pulmonary, intestinal,
cardiac or inflammatory bone disorders, bone resorption disease,
alcoholic, viral or fulminant hepatitis, coagulation disturbances,
burns, reperfusion injury, keloid formation, scar tissue formation,
yvrexia, periodontal disease, obesity and radiation toxicity. The
leukocyte adhesion molecule-1 (ELAM-1) on human umbilical vein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches

Polynucleotide sequences encoding new proto:cadherins - useful proto:cadherins - useful proto:cadherins - useful proto:cadherins - useful proto:cadherins - useful proto:cadherins - useful proto:cadherins - useful proto:cadherins - useful proto:cadherins - useful proto:cadherins - useful proto:cadherins of the human cDNAs corresp. to the partial cDNAs of two full length human cDNAs corresp. to the partial cDNAs of HUMAN-42 and HUMAN-43 (Q68981,Q68982) were isolated contained the putative entire coding sequences of two cDNAs which contained the putative entire coding sequences of two novel proteins designated protocadherin-42 (pc42) and protocadherin-43 (pc43). The DNA and deduced AA sequences of pc42 are in (pc43). The DNA and deduced AA sequences of pc42 are in (pc43). The DNA and deduced AA sequences of pc42 are in protocadherin such coverall structures of pc42 and pc43 are similar to that of typical cadherins but those of pc43 are similar to that of typical cadherins but they do have distinct features. Both lack the prosequences that are present in all known cadherin precursors. The extracellular domains of pc42 and pc43 are different in length conditions are contains seven subdomains that closely resemble the conditions. The sequences do not show any significant homology with those of known cadherins or cadherin-related proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Polynucleotide(s) encoding human protocadherins pc3 and pc4 and rat pc5 - involved in cell-cell adhesion and regulation activities

Example 3; Page 71-75; 146pp; English.

This sequence represents a clone of the human protocadherin sequence, designated pc42. The cDNA encoding this sequence was isolated after screening a human foetal brain cDNA library (contained within lambdaZapII vectors), with 32P labelled versions of the sequences represented by r03605 and r03606. The cytoplasmic domain of cadherin interacts with the cytoskeleton through catenins and other cytoskeleton associated proteins. The cytoplasmic domain is not present in all cadherins, but in those which possess it, it is essential for the cadherins adhesive function.

The cadherins which do not possess a cytoplasmic domain appear to function via a different method from those with a cytoplasmic domain. This protein sequence is involved in cell-cell adhesion. This sequence may have regulatory functions in the cell, as well as the cell-cell cused therapeutically.

Second of the component is a cytoplasmic domain appear to the component is involved in cell-cell adhesion. This sequence was functions in the cell, as well as the cell-cell cused therapeutically.

CC This sequence represents a possible alternatively spliced version of the clone of the human protocadherin sequence, designated pc42. The cDNA cc encoding this sequence was isolated after screening a human foetal brain cCDNA library (contained within lambdaZapII vectors), with 32P labelled cc versions of the sequences represented by T03605 and T03601. The most cabundant spliced version of pc42 is represented in T03621. The cC cytoplasmic domain of cadherin interacts with the cytoskeleton through cc catenins and other cytoskeleton associated proteins. The cytoplasmic cdomain is not present in all cadherins, but in those which possess it, it is essential for the cadherins adhesive function. The cadherins which do not possess a cytoplasmic domain appear to function via a different cethod from those with a cytoplasmic domain. This protein sequence is convolved in cell-cell adhesion. This sequence may have regulatory the contions in the cell, as well as the cell adhesive properties.

CC Antibodies produced against this sequence are useful for modulating the conditions of protocadherins, and can be used therapeutically.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
C factor -alpha (TNF-alpha) antibody (Ab) heavy chain complementarity (determining region 3 (CDR3).

C The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or C less and has a Koff rate constant of 1x10 power -3 s power -1 or C less (both determined by surface plasmon resonance), and neutralises human TNF-alpha cytotoxicity in a standard in vitro C 1292 assay with an IC50 of 1x10 power -7 M or less The Ab, which C inhibits TNF-alpha activity, can be used to treat sepsis, autoimmune diseases, e.g. rheumatoid arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis, allergy, multiple sclerosis, autoimmune diabetes, autoimmune uveitis or nephrotic syndrome, infectious diseases, malignancy, pulmonary, intestinal, cardiac or inflammatory bone disorders, bone resorption disease, alcoholic, viral or fulminant hepatitis, coagulation disturbances, calcoholic, viral or fulminant hepatitis, coagulation disturbances,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches

The sequences forming the boundaries of the 3' end regions are consistent with the consensus sequence of mRNA splicing, suggesting that these clones may corresp. to alternatively spliced mRNAs. The DNA and AA sequences of one possible product of alternative splicing of pc42 mRNA are given in Q68999/R58911. The DNA and AA sequences of two possible products of alternative splicing of pc43 mRNA are respectively presented in Q69000/R58912 and Q69001/R49144. Sequence 1203 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     clones were isolated with each probe including two cDNAs which contained the putative entire coding sequences of two novel proteins designated protocadherin-42 (pc42) and protocadherin-43 (pc43). The DNA and deduced AA sequences of pc42 are in Q68997/R58906, while those of pc43 are in Q68998/R58907. Sequence
                                                                                                                                                                                                                                                                                                                                        High affinity antibodies against human TNF alpha - useful TNF alpha activity, e.g. to treat autoimmune diseases and Claim 9; Page 65; 102pp; English. The present sequence is a novel anti-human tumour necrosi.

                                                                                                                                                                                                                                  High activity, e.g. to treat autoimmune diseases and cancer PT TNF alpha activity, e.g. to treat autoimmune diseases and cancer PS Disclosure; Page 75; 102p; English.

CT free present sequence is a novel anti-human tumour necrosis factor-alpha (TNF-alpha) antibody (Ab) heavy chain complementarity determining region 3 (CD3).

CT flee present sequence is a novel anti-human tumour necrosis factor-alpha (TNF-alpha) antibody (Ab) heavy chain complementarity determining region 3 (CD3).

CT flee Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or less and has a Koff rate constant of 1x10 power -3 s power -1 or less and has a Knoff rate constant of 1x10 power -3 s power -1 or less (both determined by surface plasmon resonance), and neutralises human TNF-alpha cytotoxicity in a standard in vitro CC L929 assay with an IC50 of 1x10 power -7 M or less. The Ab, which cautismune diseases, e.g. rheumatoid arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis, allergy, multiple CC syndrome, infectious diseases, autoimmune uveitis or nephrotic CC syndrome, infectious diseases, malignancy, pulmonary, intestinal, CC cardiac or inflammatory bone disorders, bone resorption disease, CC syndrome, infectious diseases, malignancy, pulmonary, intestinal, CC alcoholic, viral or fulminant hepatitis, coagulation disturbances, CC burns, reperfusion injury, keloid formation, scar tissue formation, pyrevia, periodontal disease, obesity and radiation toxicity. The CC andothelial, cells (NITF-alpha induced expression of endothelial cell cendoryte adhesion molecule-1 (ELAM-1) on human umbilical vein
